

# Compact VGCK 4.0

The Compact Vertical Graphics Card Kit 4.0 provides small cases with big highlights. The kit allows graphics cards to be mounted vertically inside the compact MS-Y1000 and MS-Z1000 micro-ATX cases. This new orientation puts the GPU's visual design in the limelight. The installation of the mounting bracket is especially easy and requires no additional accessories.

## *Little Effort for Great Performance*

The vertical installation makes the graphics card look particularly effective. The card's fans or RGB illumination can therefore be optimally presented thanks to the Compact VGCK. The mounting bracket is installed in just a few minutes and the graphics card is connected to the mainboard via the riser cable.

Thanks to the modern PCIe 4.0 specification, data is also transmitted at a super-fast 252 Gbit/s.

## *Small Case for a Grand Show*

The Compact VGCK 4.0 is compatible with the Sharkoon MS-Z1000 and MS-Y1000 PC cases.

Impressive builds with vertical graphics cards are thus made possible in these compact cases in micro-ATX format.
