# VS4-S

The VS4-S ATX tower is a versatile PC case for price conscious users. The pre-installed fan and up to four more optional fans will continually provide an optimal air circulation, supported by an efficient airflow system. With its outwardly recessed side panels, the case offers generous room for hardware components. The hardware itself is well protected behind the front and side panels and thanks to an integrated dust filter. The front panel with its puristic design provides two USB 2.0 ports and two audio ports.

## Features

**NOT OUT OF THIN AIR**
The front panel of the VS4-S comes pre-installed with a 120 mm fan. To further strengthen the airflow inside the case, an additional 120 mm fan can be installed behind the front panel. The VS4-S also has enough room for two optional 120 mm fans behind the side panel and another on the rear panel. The casing also has a cutout for CPU coolers.

**PURISTIC DESIGN**
With its minimalistic design in matte black and clear lines, the VS4-S is suitable both as an office PC case and as an unpretentious gaming setup.

**EFFICIENT AIRFLOW SYSTEM**
The VS4-S is designed to allow a cool and even flow of air to reach the inside, while the warmth is conveyed outward through the back of the case. The fans can thus provide a constant and even circulation of air. An integrated dust filter in the bottom panel protects the installed components from dust and dirt.

**GENEROUSLY SPACIOUS**
With its outwardly recessed side panels, the VS4-S offers plenty of room. Graphics cards with a maximum length of up to 38.5 cm can be easily installed when the middle drive cage is removed. There is also space for up to six expansion cards. A convenient cable management system provides the necessary tidiness and an orderly appearance.

**VARIABLE INSTALLATION POSSIBILITIES**
For plenty of data storage, the VS4-S has various installation possibilities for different kinds of drive. The case offers three 5.25“ drive bays for optical drives or, alternatively, two 5.25“ drive bays and an externally accessible 3.5“ bay. Internally, three 3.5“ hard drives can be mounted using tool-free installation. In the second drive cage, three 2.5“ HDDs/SSDs can be installed.
