

SWITCH SET

HOT-SWAPPABLE MECHANICAL SWITCHES

TACTILE

Tactile switches offer the properties of “clicky” switches without the loud click point. The haptic feedback gives certainty about the actuation of the switch as well as providing a pleasant typing sensation. The noiselessness also supports communication during the game.

Kailh BOX Brown

The Kailh BOX Brown switches are aimed at gamers and anyone who simply wants to use their keyboard for working, as well as those who prefer a keyboard with haptic feedback. Thanks to the low operating force of 45 grams and the short distance to the switching point of 1.8 millimeters, the switches are suitable for work as well as for gaming.

Thanks to their enclosure design, they are not only dust and water resistant, but also particularly durable.

Gateron PRO Brown

The factory-lubed Gateron PRO Brown switches are suitable for users who either use their keyboard for daily work or who do a lot of writing. But they are also suitable for users who are looking for a switch with haptic feedback, but without a loud click. With an operating force of 55 grams and a distance to the actuation point of 2 millimeters, they provide a pleasant typing sensation.

Compatible and Adaptable

All switches have three pins for a wide-ranging compatibility. They are also all compatible with commercially available keycaps.

With 35 switches per package, about the right number of switches can be acquired for any keyboard size, and there will be a few more switches left over as replacements if ever needed.
