

DRAGONIA BLACK

GAMING LASER MOUSE

Unleash the dragon in you! Not only is the Drakonia Black Gaming Mouse an eyecatcher because of its dragon-scale design, but it also has all the essentials for excellent gaming performance. Apart from a weight-tuning system and eleven easily accessible buttons, the mouse is also equipped with a laser sensor which has up to 8,200 DPI of pinpoint accuracy. The mouse buttons can be customized via the free, downloadable gaming software.

High-Grade Accuracy

To make sure that every click counts, the Drakonia Black is equipped with the high-grade laser sensor Avago 9800 which has a precise sensitivity of up to 8,200 DPI. The desired DPI can be selected from one of seven preset levels. The lighting of the DPI display indicates at a glance which DPI level is currently being used.

For Fast Maneuvers

To perform maneuvers quickly and easily, the Drakonia Black has a total of eleven programmable buttons. All of these, including the 4-way scroll wheel and the thumb buttons, can be individually programmed as desired using the gaming software. The rubberized sides ensure a stable grip during the heat of the battle.

Design with Dragon's Skin

The surface of the Drakonia Black with its dragon-scale design puts individuality and an expressive character to the forefront. The design is given an elegant contrast where the Drakonia logo is lit against a black background. The logo's illumination can be customized using the gaming software, and colors can also be selected using the color switch button on the side of the mouse.

Controlled Operation

The ergonomically designed body of the gaming mouse is ideal for larger hands or for those who prefer the palm grip. Customized control with best agility is achieved by adjusting the internal weight-tuning system with its six removable weights.

Comprehensive Gaming Software

For a wide range of strategic options, the downloadable software offers a variety of customizations. These include sensitivity settings, illumination of the logo, button assignments and macro programming. Of course, the Drakonia Black can also be used without the gaming software.
