

SKILLER SGM3

WIRELESS GAMING MOUSE

The SKILLER SGM3 is the first gaming mouse from Sharkoon which allows maximum freedom of movement thanks to its wireless connection. If, however, a conventional connection is preferred, the supplied USB cable can be used instead. An integrated lithium-ion battery provides sustained operation in wireless mode. This can be conveniently charged while playing or, alternatively, wirelessly. An optical sensor with up to 6,000 DPI and seven programmable buttons provide both precision and full control. The RGB illuminated SKILLER logo not only serves as a DPI and battery indicator, but also provides a distinctive visual touch.

Dual Connectivity

The SKILLER SGM3 can either be operated wired or wirelessly via 2.4 GHz technology. For wired operation, a textile-braided cable with a USB plug is included. For wireless operation, a USB nano receiver is also supplied. Via Plug & Play, and with the click of a switch on the underside of the mouse, each type of connection can be easily selected.

Gaming Fun without Limits

Due to the precise 6,000 DPI optical sensor and a polling rate of 1,000 Hz, there are no limits set with the SKILLER SGM3 for competitive gaming. Added to that is the optional high-performance gaming software that provides full customization of speed, DPI levels, key configuration and macros.

Perfect Ease of Use

For comfortable and convenient operation, whether playing or working, the SKILLER SGM3 has rubberized side surfaces and offers a total of seven buttons. All mouse buttons are recognized without the use of the software. The dedicated DPI switches, the scroll wheel-click and the other buttons can be easily assigned any one of a variety of functions via the downloadable software.

Distinctive Highlight

The illuminated SKILLER logo on the top of the SKILLER SGM3 not only gives the mouse an extra touch of distinction, but it also indicates the selected DPI level and warns when the battery level is low. Within the downloadable software, the desired DPI number and its lighting color (from 16.8 million colors) can be individually selected for each DPI level.

No Strings Attached

The built-in SKILLER SGM3 lithium-ion battery ensures hours of gaming fun and can be easily charged wirelessly or while playing via USB. The battery level can be viewed in the software at any time. The illuminated SKILLER logo also flashes as soon as a critical threshold has been reached.
