

Brief Instructions:

1. Switch off your PC and disconnect the power cord.
2. Open the PC case.
3. Remove the 5.25" mounting bay's front bezel.
4. Insert the docking station into the mounting bay.
5. Attach the docking station from both sides inside the mounting bay using the included screws.
6. Connect the docking station's SATA data cables to the respective SATA connectors on the mainboard (for further information also refer to your mainboard's manual).
7. Connect the internal USB3.0 cable of the docking station to the respective available USB3.0 connector on the mainboard (for further information also refer to your mainboard's manual).
8. Plug the power connector on the docking station's back side to a matching power connector of your PSU.

Before its first use, the hard drive must be partitioned and formatted:

To format the hard drive, right click with the mouse on **My Computer** and then select **Manage**.

In Windows 7, select **Start**, right click on **Computer** and select **Manage**.

Select **Disk Management**. Here you will find a list of the hard disks and drives you can format.

Right click on the desired hard drive and select **Partition**. It is possible that the disk must still be first initialized.

We recommend using the NTFS file system for Windows PCs. You can then reformat the hard disk.

Caution:

Ensure that you have selected the correct disk to format; any data on the selected hard disk will be lost during partitioning and formatting!
